The challenge of resolvable Persistent Identifiers

Implementation of HTTP PID in Spain for INSPIRE

**Francisco J Lopez-Pellicer (IAAA - UNIZA
R)**

Antonio F. Rodriguez (CNIG)

**Technologies and Tools required to deliver INSPIR
E**

28 Septiembre 2016

INSPIRE Conference 2016

Barcelona, 26th - 30th September

Agenda

1. What is a resolvable PID?
2. Resolvable HTTP URI for INSPIRE PID
3. Proposal and prototype for Spain
4. Conclusions

What is a resolvable PID? Resolvable identifier

Identifier:

Scope (CharacterString) → Resource, $t \in [t_0, t_1)$

<http://www.sagradafamilia.org/> →

Portal
Web

Resolvable Identifier:

System(CharacterString, Context) → Representation, $t \in [t_0, t_1)$

Tourist visiting Barcelona (2000-**2018**)

Information (HTML)

DNS record expiration date

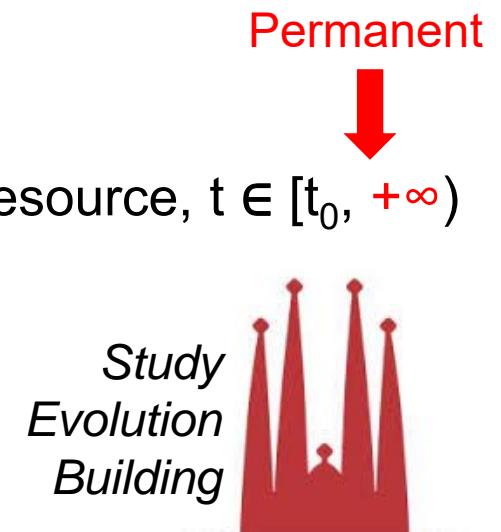

What is a resolvable PID?

Resolvable persistent identifier

Persistent identifier (PID):

Scope (CharacterString) → Resource, $t \in [t_0, +\infty)$

doi 10.3989/ic.08.057 →

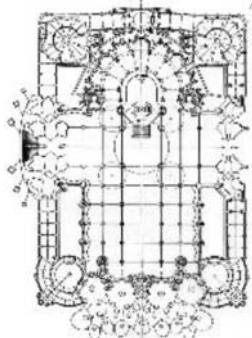

Resolvable persistent identifier (resolvable PID):

System(CharacterString, Context) → Representation, $t \in [t_0, +\infty)$

PID proxy <http://doi.org/10.3989/ic.08.057>

PID 10.3989/ic.08.057

Information (PDF)

Architect interested in Sagrada Familia (2009- ∞)

Location + metadata while DOI/Handle system persist

Why you have to worry about this issue?

Resolvable HTTP URI for INSPIRE PID

INSPIRE has resolvable PID (but ...)

Directive 2007/2/CE INSPIRE → identifier

- Spatial Objects

Regulation 1089/2010 Spatial Data Sets → persistent

- Data type *Identifier* for Spatial Objects

Regulation 976/2009 Network Services → resolvable

- Download services may use *Identifier* in requests

http://www.ign.es/wfs-inspire/ngbe?service=WFS&version=2.0.0&request=GetFeature&STOREDQUERY_ID=urn:ogc:def:query:OGC-WFS::GetFeatureById&ID=ES.IGN.NGBE.1733990

Europe prefers a different kind of resolvable HTTP PID

- Several causes: Interoperability, Open Data, Web API, ...

Resolvable HTTP URI for INSPIRE PID

Can we adapt our URIs?

Easy: Define a national HTTP URI schema for INSPIRE PID

- For example

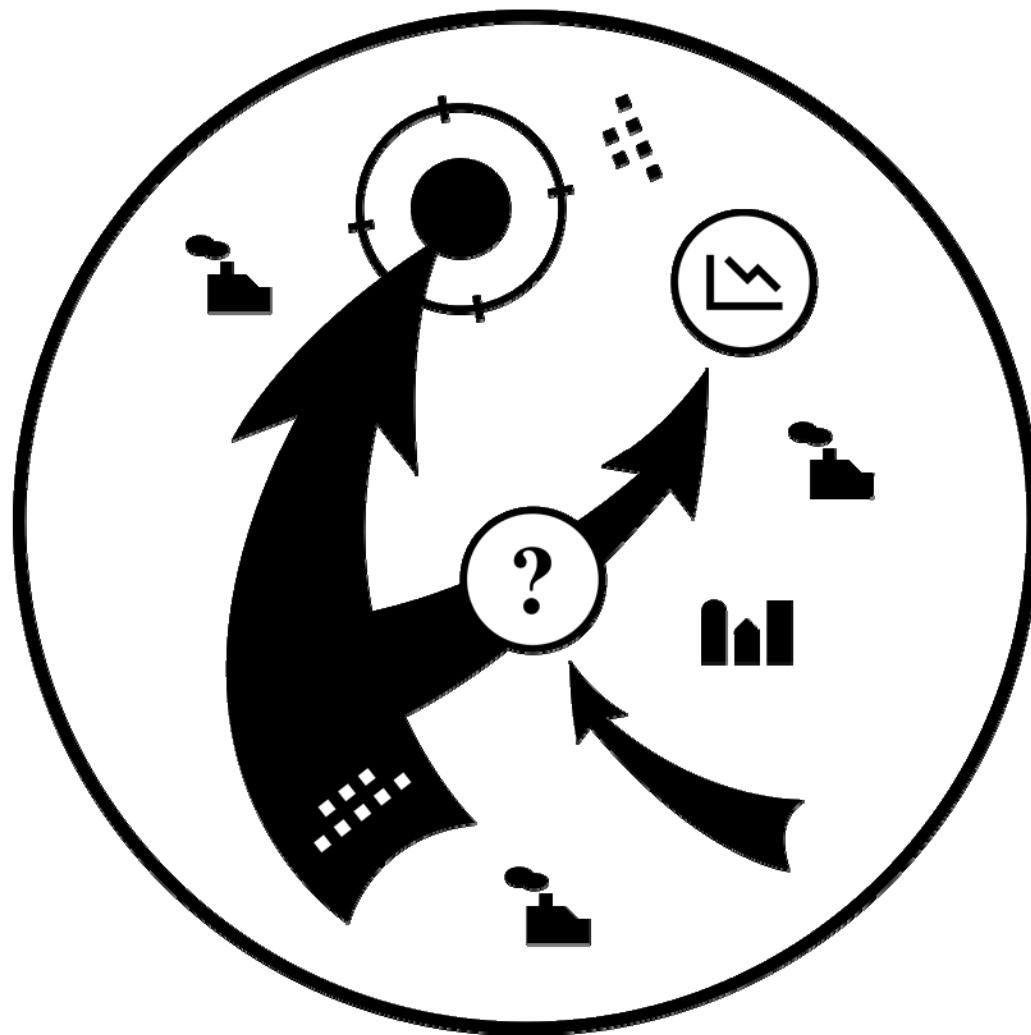

<http://environment.data.gov.uk/id/bathing-water/ukc2102-03800>

Hard: Integrate with existing national INSPIRE infrastructure

- Register or harvest millions of Identifiers from Spatial Objects from data providers and keep them updated (location, status, ...)
- Resolve HTTP URI to requests to download services

Challenge: Ensure long-term persistence of HTTP URI

Proposal and prototype for Spain

Proposal and prototype for Spain

Legal framework

Spanish legal framework

- INSPIRE, regulations and technical guides
- ENI → National Interoperability Schema (rules of interoperability for public administrations in Spain)
- Autonomic norms

ENI: few constraints but significant gaps

- Mandatory URI scheme for public information resources
- Lack of URI governance framework
- Lack of persistent identifier governance framework

Proposal and prototype for Spain

A practical proposal

HTTP URI schema for INSPIRE

ENI → `http://{base}/recurso/{namespace}/{localId}` ← **INSPIRE**

Integration with existing INSPIRE architecture

- Harvest identifiers of spatial objects in download services
- Resolve HTTP URI INSPIRE to requests to download services

Ensuring long-term persistence of HTTP URI INSPIRE

- Central registry of namespaces
- Central archive of identifiers (long-term persistence)
- Central resolver (long-term resolution)
- Local registries of identifiers synchronized with the central archive and local resolvers for larger data providers

Proposal for Spain

Prototype – current status

“Harvester” → Running prototype (under test)

- Sources WFS IGN, Junta de Andalucía
- Spatial Objects of type Crossing → 31948 (IGN)
- Spatial Objects of type NamedPlace → 1114875 (IGN) 121905 (JdeA)

Resolver system → Running prototype (under test)

Archive → In development

PID browser/resolver (Beta, harvested PID)

- <http://laloteta05.cps.unizar.es:8080/pid-registry/api/ns>

Proposal for Spain Prototype – current status

Namespaces

[Volver a la página anterior](#)

Hay 2 namespaces

Mostrando 1 - 2 de 2

Id. Namespace	Tipo de fuente
ES IGN IGR_HI	WFS
ES.IGN.NGBE	WFS

Espacio de Nombres ES.IGN.NGBE

[Volver a la lista de Namespaces](#)

Detalles básicos

Identificador	ES.IGN.NGBE
Contenido	Hay 1114875 IdentificadoresPersistentes
Tareas	Listado
Renovación	DAILY

Fuente

Tipo de Fuente	WFS
Localización	http://www.ign.es/wfs-inspire/ngbe
Objeto Espacial contenido	NamedPlace
Esquema de Aplicación	http://inspire.ec.europa.eu/
Prefixo del Esquema de Aplicación requerido por el extractor	gn
Propiedad equivalente a geometry requerido por el extractor	geometry
Propiedad equivalente a beginLifeSpanVersion requerido por el extractor	beginLifeSpanVersion
Umbral entre profundizar o recuperar requerido por el extractor	10000
Extensión requerido por el extractor	[-10.0, 34.5, 5.0, 44.5]
Actuar como servidor proxy requerido por el resolutor	false

Espacio de Nombres ES.IGN.NGBE

[Volver a la lista de Namespaces](#)

Detalles básicos

Identificador	ES.IGN.NGBE

Localización	http://www.ign.es/wfs-inspire/ngbe
Objeto Espacial contenido	NamedPlace

Conclusions

Resolvable HTTP URI for INSPIRE are an opportunity

- Visibility, integration with other systems, ...

Technically feasible? → Yes

Organisational challenge? → Yes

- Need of some national framework supporting the system
- Need of PID policies in data providers
