*Services

*Metadata

*Implementation

*Opinions

INSPIRE services

*Published layers(WMS and WFS):

- Reference parcels (LPIS)
- Landscape elements (part of LPIS)
- Agricultural parcels (GSAA)
- Ecological focus areas (EFA)

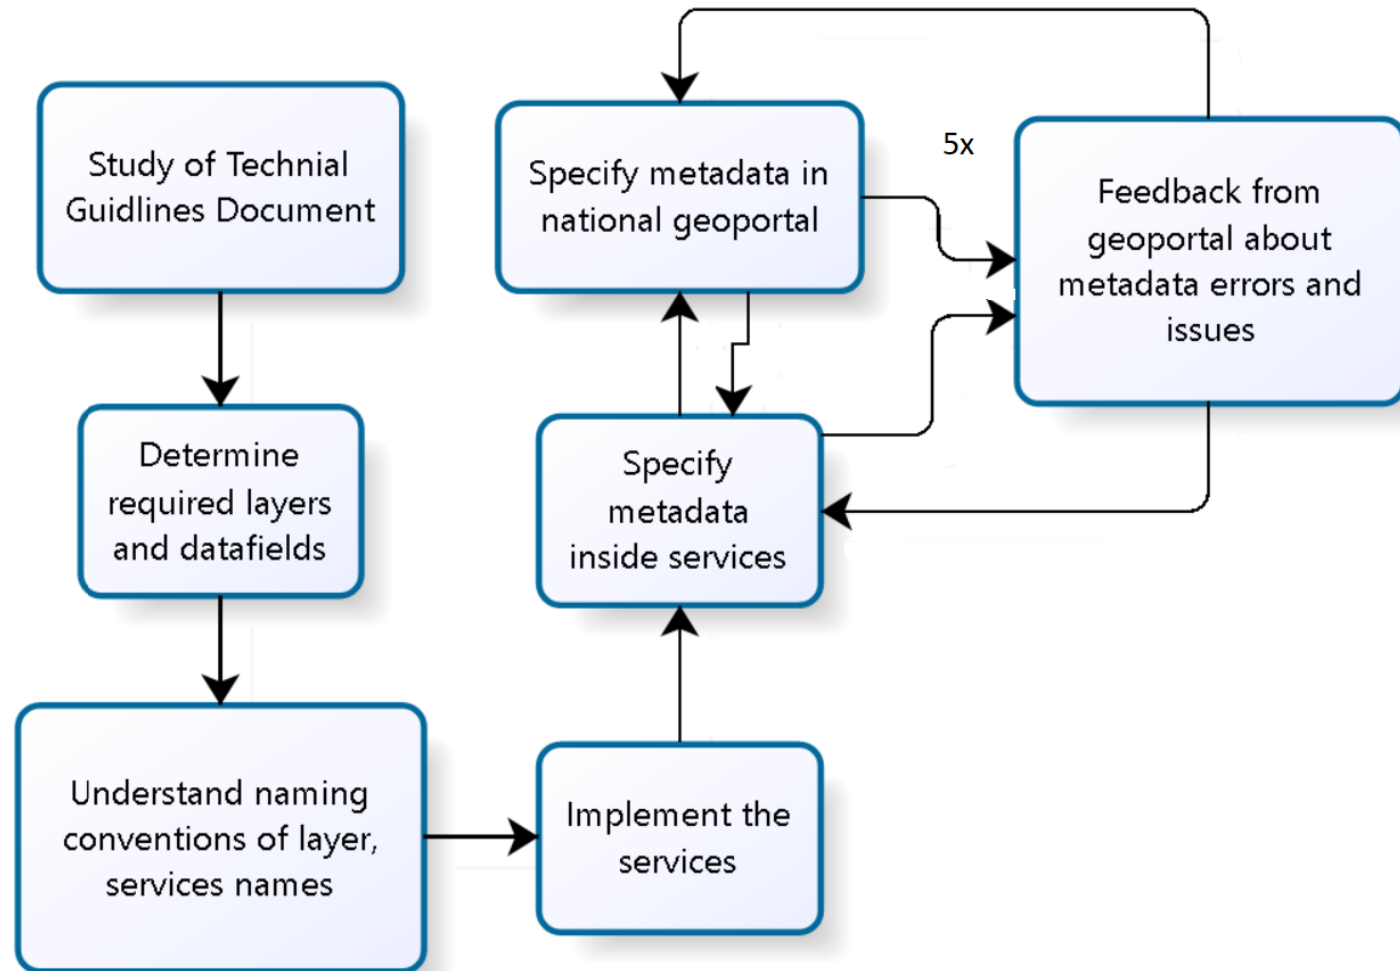

*Data not transformed, codelists (like landcover, crop names, etc) in Estonian

*Using Geoserver + inspire plugins

Metadata in Estonia

- *All managed by Estonian Land Board
- *Updated manually in national geoportal

Process of adding data services

Experience

- *Already familiar with INSPIRE
- *Contacts in Estonian Land Board
- *Template for INSPIRE metadata
- *Less requirements for LPIS, GSAA services
- *Estonian Land Board invaluable

Opinions about INSPIRE

- * Non-standard metadata requirements
- * For classical thematic services no standard solution to serve full specification
- * Difficult to consume services
- * Good idea
- * Non-inspire open data
