The INSPIRE Technical Guidelines now …

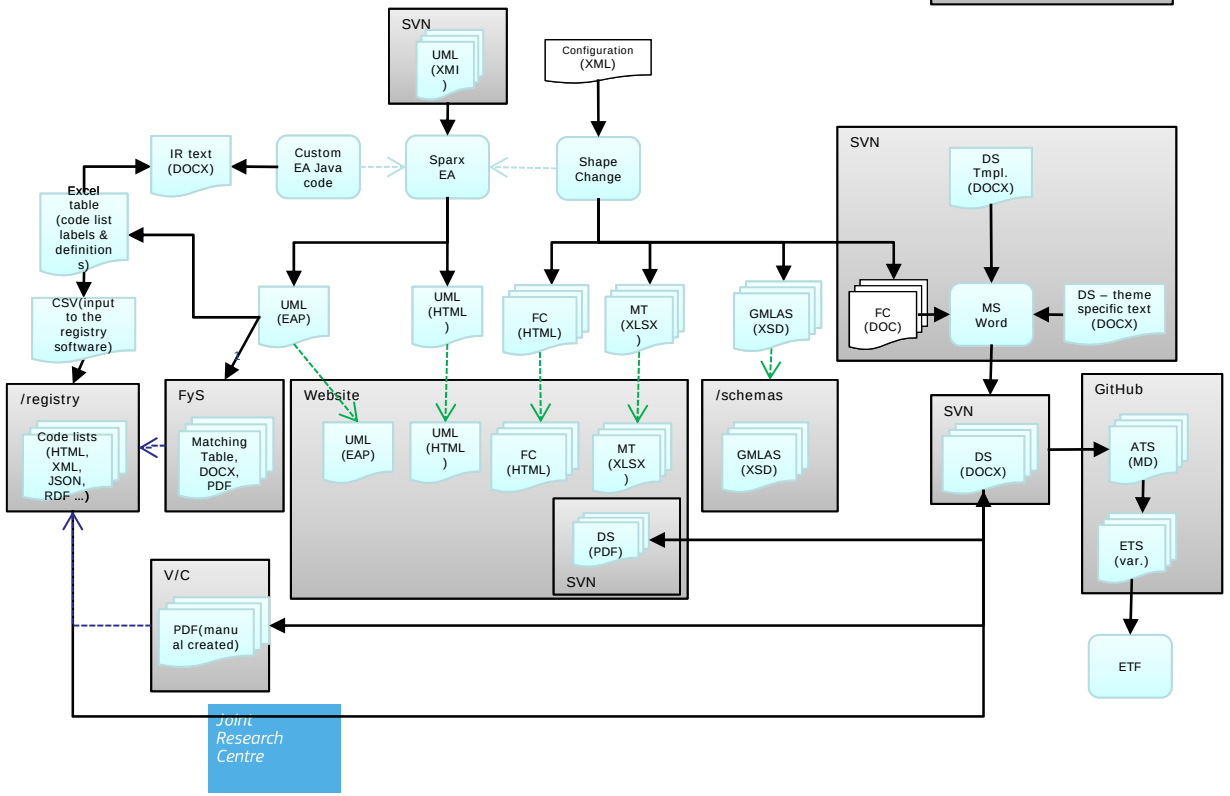
- Difficult to keep all representations consistent when making updates



European Commission

… and what they could look like in the future

- Modular structure
- Content managed in an online repository
- Simple editing, reuse and discussions for endorsing change requests
- Automated creation of different document versions from atomic text building blocks
- Change once and propagate to all representations
- Demonstrator

Discussion

- Is this work adding value?
- Which additional representations (and for which readership) should be created?
- What features or functionalities should be supported?
- What implications would such a new approach have for the Maintenance workflow?
- Do you see a potential for reuse in other contexts?
