

Digital transformation and the future of SDIs

Questions for discussion

Interactive Workshop

INSPIRE Conference, Antwerp
21 September 2018, 9.00 – 10.30

Questions

Q1: What are the drivers of digital transformation of government in your country? What technologies are already leveraged to enable this transformation? Do you have key metrics to measure the extent or impact of digital transformation?

Q2: What technologies do you expect to bring the most value in the next 5 years for digital transformation and SDIs in the public sector? And what technologies are overhyped and should be examined with more care?"

Q3: What are the digital transformation success stories, what have been the enablers to these successes?

Q4: What are the main barriers and risks to digital transformation? How are they being addressed?

Q5: Is the concept of an SDI still relevant after 25 years? Does the SDI concept still fulfil users' needs?

Q6: How well placed is INSPIRE to support digital transformation of government? How has INSPIRE evolved in your country in this context and what needs to be done further? Is an incremental change needed or a radical rethink to continue to derive value from INSPIRE over the next 10 years?

Q7: Do geoportals perform a useful function or are there better ways to access geodata? Should geoportals evolve to become digital platforms and in what ways?

Q8: Where are the biggest 'knowledge gaps' in your plans for using location data as part of your digital transformation. What key questions should ELISE address in the Geospatial Knowledge Base Service?
