# **INSPIRE, data spaces and users What for who?**

# Data spaces

- A place for data from private and public producers
  - Lesson learned with INSPIRE :
  - Success follows governance
  - Users-driven policies are the best
  - An ocean of needs
  - So priorities are the keys
-

# Users

- Priorities from which point of view?
  - Users, but whom?
    - Citizens?
    - Administrations, including EU ones?
    - Enterprises?
    - Thematic domains?
-

# Ideally

- Do not let the producers drive the dataspace
    - For effectiveness, users are needed inside
  - Be fair : parity business (Groups + SMEs)/public administration (EC + MS)/NGO...
-
